

Dr. Anestis Koutsoudis received his Bachelor of Science (Hons) Computer Studies (Visualisation) from the University of Derby and his Master of Science in Multimedia Technology from the Computer Science Department at the University of Bath. In 2010, he earned his PhD in “3D Content-based retrieval and MPEG-7 metadata” from the Electrical and Computer Engineering Department of Democritus University of Thrace.

Since his undergraduate studies, he has been engaged in software engineering and computer graphics. He served as the head of the IT department of the regional TV channel Channel 6 - Radio Television SA. Since 2002, he has been affiliated with the Athena Research and Innovation Centre where he currently holds the position of Research Director and leads the [Clepsydra Digitisation Lab](#).

For more than two decades, he has contributed to numerous research and development projects funded by national and EU resources, acting as coordinator, principal investigator, or team member. These projects have focused on real-time 3D graphics programming, terrestrial and aerial automated 3D digitisation of artefacts, urban areas, monuments and architectural, 3D printing, 3D content analysis, information retrieval, multimedia technologies, VR, HCI and IT applications in the cultural heritage and education domains.

He serves as a reviewer for international scientific journals and conferences and is an active participant on journal editorial boards and conference scientific committees. He is a member of undergraduate and postgraduate dissertation and PhD committees and supervises the work placements of visiting students. He is a senior member of the IEEE Computer Society and a member of the Hellenic Informatics Union, a founding member of the Athena RC Researchers Association, and a member of the GSRI, ELIDEK and Fund For Scientific Research evaluators register.
